1. Executive Summary

TradVue is an AI-powered trading analytics and journal platform built for retail traders who are serious about improving their performance. Operating under ApexLogics, TradVue provides a unified workspace — real-time market data, trade journaling, portfolio tracking, stock analysis, and AI-driven insights — at a price point the current market simply doesn't offer.

The problem is straightforward: most retail traders lose money not because markets are unpredictable, but because they repeat mistakes they never tracked. The tools that help serious traders improve are either expensive ($29–$49/mo), narrowly focused, or require stitching together four separate subscriptions. Traders are underserved and overpaying.

TradVue solves this with a single, well-designed platform covering everything a trader needs to analyze performance and make better decisions. The free tier is genuinely useful — not a crippled teaser — supported by tasteful financial advertising. The Pro tier at **$12.99/month** is the most competitively priced full-featured trading platform on the market.

The market opportunity is real: approximately **15–20 million Americans** actively trade equities and options, a cohort that grew dramatically from 2020 onward as zero-commission brokers lowered the barrier to entry. Even a small slice of traders seeking analytics tools represents a substantial addressable market.

Our competitive advantage is structural: TradVue is built with an AI-first development model that allows a solo founder to ship at the pace of a small team, at infrastructure costs that scale gradually rather than steeply. This keeps burn near-zero and gives us an unusually long runway.

We are seeking seed investment and strategic partnerships to accelerate user acquisition and expand broker integrations. TradVue is pre-revenue with MVP live at tradvue.com.

---

2. Problem

Retail Traders Are Flying Blind

The democratization of trading created a large and growing cohort of retail traders — but access to execution is not the same as access to insight. Most retail traders lack systematic processes for reviewing their own performance.

Three compounding problems:

1. No systematic self-analysis Studies consistently show that retail traders who don't maintain structured trade journals exhibit higher error rates, larger drawdowns, and repeat behavioral mistakes. Journaling is widely acknowledged as one of the highest-leverage habits for trader improvement — yet the tooling to do it is fragmented and expensive.

2. Existing tools are too expensive, too narrow, or both

Tool	Price	What It Does	What's Missing
TradeZella	$29–$49/mo	Journal + reports	No free tier, no market data
TradingView	Free–$59.95/mo	Charts only	No journal, no portfolio
Edgewonk	$169/yr	Desktop journal	No real-time data, desktop-only
TradeSync	$29.99/mo	Auto-sync	Minimal analytics

The combined cost of a TradingView subscription + a journaling platform + a news feed can easily exceed **$70–100/month** — a real burden for a trader who may be starting with $5,000–$20,000 in capital.

3. Tool fragmentation destroys workflow A typical serious retail trader uses: a broker platform for execution, TradingView for charts, a spreadsheet or journaling app for trade review, a news/calendar app for macro context, and possibly a ratings service for stock research. Switching between these tools mid-session introduces friction, delays, and missed context.

The gap in the market: No tool currently combines journal + market data + AI insights + portfolio tracking at a price accessible to traders who aren't already profitable.

---

3. Solution

TradVue: One Platform for Serious Retail Traders

TradVue provides a unified trading workspace with the following core capabilities:

📊 **Real-Time Market Data** Live quotes, intraday charts, sector performance, and market breadth indicators — the data layer every trader needs, built in.

📰 **News & Economic Calendar** Curated financial news feed with source filtering. Integrated economic calendar showing upcoming events (Fed meetings, earnings, macro data releases) that move markets.

📓 **Trading Journal**

- Manual trade entry with full trade metadata (entry/exit, size, strategy, notes, emotions)
- **CSV import** supporting Robinhood, Interactive Brokers, and generic broker formats
- Trade tagging and custom categorization
- Win rate, P&L analytics, drawdown tracking, and performance by strategy/symbol/time

💼 **Portfolio Tracking** Multi-position portfolio view with privacy controls. Track performance vs. benchmarks.

🤖 **AI-Powered Insights**

- **TradVue Score:** Proprietary composite rating algorithm combining technical signals, fundamental quality indicators, and relative strength
- **Trade Pattern Recognition:** AI identifies recurring behavioral patterns in trade history (e.g., "You underperform when trading FOMO entries after gap-ups")
- **AI Trade Commentary:** Contextual analysis on individual trades and weekly summaries

📈 **Stock Analysis** Fundamental data, analyst estimates, earnings history, and TradVue composite ratings in a clean, scannable format.

What TradVue is not: TradVue is not a broker, does not execute trades, and does not provide investment advice. It is an analytics and journaling platform. All insights are informational only.

---

4. Market Analysis

Sizing the Opportunity

Total Addressable Market (TAM): ~$12–15B

The global online trading platform and analytics market was valued at approximately **$8.5 billion in 2023** and is projected to reach **$13–15 billion by 2028** at a CAGR of ~8–10% (Allied Market Research, Grand View Research, 2023–2024 estimates). This includes SaaS analytics tools, trading platforms, and financial data services targeting retail participants.

The retail trader population underpinning this market:

- Robinhood reported approximately **23 million funded accounts** at peak (2021); as of 2024, ~24 million monthly active users across major retail brokerages (Schwab, Fidelity, Robinhood combined)
- Retail trading volume accounted for approximately **23–25% of total US equity volume** in 2023, up from ~10% pre-pandemic (Bloomberg, CBOE data)
- An estimated **15–20 million Americans** actively trade equities or options in any given year, with a core "serious trader" segment of approximately **3–5 million** who spend money on tools and education

Serviceable Addressable Market (SAM): ~$600M–$1.2B

The SAM represents English-speaking retail traders who:

- Actively use third-party analytics or journaling tools (estimated at ~15–20% of the active trader population)
- Are willing to pay for a SaaS product in the $10–$50/month range

At the midpoint of the active US trader estimate (~17M), a 15% tool-adoption rate yields ~2.5M potential paying users. At an average revenue per user of $10–$15/month, the SAM is approximately **$300M–$450M/year in the US alone**. Adding English-speaking markets (UK, Canada, Australia) roughly doubles the SAM.

Serviceable Obtainable Market (SOM): $600K–$2M in Years 1–3

TradVue's realistic 3-year SOM is based on organic and semi-organic acquisition — Reddit, Twitter/FinTwit, content marketing, and word-of-mouth. At **3,000 paying users by Year 3** at $12.99/month, plus advertising and referral revenue, this represents **~$600K ARR** — less than 0.1% of the US SAM. This is a deliberately conservative and achievable target.

Market Growth Tailwinds

- Zero-commission brokers (Robinhood, Webull, moomoo) have created a permanent structural increase in retail participation
- Options trading by retail investors grew by ~40% between 2019 and 2023 (OCC data)
- The "trader improvement" segment — courses, tools, coaching — has expanded significantly; TradVue targets users who have moved past novice stage and want to get systematic

- Gen Z and millennial retail traders (the fastest-growing cohort) show strong SaaS tool adoption patterns and price sensitivity — exactly the profile TradVue targets

---

5. Competitive Landscape

Where TradVue Fits

Feature	**TradVue**	TradeZella	TradingView	Edgewonk	TradeSync	Seeking Alpha
Price (paid)	**$12.99/mo**	$29–$49/mo	$14.95–$59.95/mo	$169/yr	$29.99/mo	$19.99–$29.99/mo
Free Tier	✅ Full-featured	❌	✅ Charts only	❌	❌	✅ Limited
Trade Journal	✅	✅	❌	✅	✅	❌
CSV Import	✅	✅	❌	✅	✅	❌
Real-Time Market Data	✅	❌	✅	❌	❌	❌
News Feed	✅	❌	✅ Limited	❌	❌	✅
Economic Calendar	✅	❌	✅	❌	❌	❌
AI Insights	✅	❌	❌	❌	❌	❌
Stock Ratings	✅	❌	❌	❌	❌	✅
Portfolio Tracking	✅	❌	✅ Limited	❌	❌	✅
Web-Based	✅	✅	✅	❌ Desktop	✅	✅

Competitive Summary

TradeZella is TradVue's most direct competitor — a journaling-focused SaaS with strong broker import. At $29–$49/month with no free tier, it leaves price-sensitive traders underserved. TradVue undercuts it by 50–75% while adding market data and AI features it lacks.

TradingView is a charts tool that has become the de facto standard for retail chart analysis. It is not a journal. Its free tier is chart-only; its paid plans are expensive. TradVue is not competing with TradingView's chart depth — it complements it for users who can't afford both, and competes directly for the "I just need something that works" trader.

Edgewonk is a respected desktop journal with strong analytics. Its desktop-only nature, lack of real-time data, and one-time pricing model make it less sticky and harder to retain.

The gap TradVue fills: No competitor offers a free, genuinely useful tier that includes market data, news, journal, and AI insights. TradVue's $12.99 Pro tier is cheaper than every direct competitor, while offering more functionality than any single one.

---

6. Business Model & Pricing

Revenue Architecture

TradVue is built on three revenue streams designed to mature in sequence:

Tier 1: Free (Ad-Supported)

What's included:

- Full dashboard with real-time market data
- News feed and economic calendar
- Watchlist management
- Trade journal (up to 50 trades/month)
- Basic performance reports
- Stock analysis and TradVue Score

How it monetizes:

- **Google AdSense:** Tasteful financial display ads. At a conservative **$3–5 CPM** for a financial audience, 1,000 active free users generating 50 page views/month each = 50,000 impressions/month = ~$150–250/month
- **Broker referral links:** Integrated broker comparison with referral tracking. Brokers pay **$50–150 per funded account referral** (industry standard; Interactive Brokers, Webull, moomoo all run programs). Even at 0.5% referral conversion on free users, this compounds meaningfully at scale.

The free tier is designed to be genuinely useful — not crippled — because the goal is user retention and word-of-mouth. A trader who gets real value from the free tier is a trader who recommends TradVue and eventually converts to Pro.

Tier 2: Pro ($12.99/month or $99/year — saves ~37%)

Everything in Free, plus:

- Unlimited trade journal entries
- Advanced performance analytics (trade heatmaps, strategy P&L breakdown, drawdown analysis)
- AI trade insights and pattern reports
- Full CSV import/export
- Custom trade tags and strategy labels
- Portfolio tracking with privacy controls
- Priority data refresh rate
- **Ad-free experience**

At **$12.99/month**, Pro is priced to be an easy "yes" for any trader spending more than a few hundred dollars/month on tools. The annual plan at $99 (~$8.25/month) is designed to reduce churn and improve LTV.

Revenue Streams Summary

Stream	Year 1 (Est.)	Year 2 (Est.)	Year 3 (Est.)
Pro Subscriptions	~$23,000	~$125,000	~$468,000
Advertising	~$1,500	~$24,000	~$72,000
Broker Referrals	—	~$6,000	~$60,000
Total ARR	**~$24,500**	**~$155,000**	**~$600,000**

Note: Referral revenue excluded from Year 1 as broker partnership agreements require user base to be established. All figures are projections — see Section 10 for full model.

Pricing Rationale

The $12.99 price point was chosen deliberately:

- **Below the psychological $15 threshold** for recurring consumer SaaS
- **~55% cheaper** than the nearest direct competitor (TradeZella at $29/mo)
- **Higher quality-per-dollar** than anything currently on the market in this category
- Annual plan ($99) encourages commitment and improves cash flow predictability

---

7. Go-to-Market Strategy

Distribution Philosophy

TradVue's initial distribution is entirely organic. No paid ads in Year 1. This is not a constraint — it is a deliberate choice that forces product quality to drive growth. Traders talk to other traders; community trust is earned through product merit, not ad spend.

Phase 1: Community Seeding (Months 1–3)

Target channels:

- **Reddit:** r/Daytrading (~~400K members), r/options (~~2.5M members), r/stocks (~6M members), r/RobinHood, r/wallstreetbets
  - Approach: Genuine participation, not spam. Share TradVue when the product is genuinely relevant. Post "I built this" with honest detail.
- **Twitter/X FinTwit:** The retail trading community on Twitter is highly active. Build @TradVue audience by engaging traders directly, sharing useful content (market recaps, trade tips), and demonstrating product value
- **Discord trading servers:** Many active trading communities run Discord servers with 1,000–50,000 members. Direct outreach to server admins for partnership or feature placement

Goal: First 200–300 registered users, qualitative feedback loop

Launch offer: First 100 users get **Pro free for 3 months**. Creates early advocates and generates real usage data for product iteration.

Phase 2: Content & SEO (Months 3–6)

TradVue's SEO content strategy targets high-intent search queries:

- "best trading journal app" — estimated 5,400 searches/month (US)
- "how to review your trades" — estimated 2,900 searches/month
- "TradingView alternatives" — estimated 8,100 searches/month
- "TradeZella alternative" — competitor branded search
- "day trading performance tracker" — estimated 1,600 searches/month

Content plan:

- 2 long-form SEO blog posts/month (strategy guides, broker comparisons, "how to build a trading journal")
- YouTube presence: screen-recorded product tutorials and trading workflow content
- Email onboarding sequence: 7-part sequence for new signups walking through product features, trading improvement principles, and Pro upgrade prompts

Goal: 500–800 organic search visitors/month by Month 6, consistent conversion to free signups

---

Phase 3: Leverage & Scale (Months 6–12)

Once product-market fit is established (defined as: >60 DAU/MAU ratio on free tier, >40% of Pro users active weekly):

- **Trading influencer partnerships:** Outreach to FinTwit/YouTube traders with 10K–100K followers. Micro-influencers have higher conversion rates and lower cost than macro influencers. Target: 5–10 partnerships with affiliate commission structure
- **Broker partnership discussions:** Begin conversations with smaller/challenger brokers (moomoo, Webull, tastytrade) about co-marketing or referral arrangements
- **Limited paid acquisition:** Test Google Ads on high-intent search terms with a controlled $500–$1,000/month budget; kill or scale based on CAC data

---

Email Strategy

TradVue's email onboarding sequence is already built. It follows a structured cadence:

1. **Day 0:** Welcome + quick start guide
2. **Day 2:** "Your first trade journal entry" — feature introduction
3. **Day 5:** Case study on how journaling improves performance
4. **Day 10:** TradVue Score explained + Pro feature preview
5. **Day 15:** Social proof + trader community angle
6. **Day 21:** Soft upgrade prompt with annual plan discount
7. **Day 30:** Direct upgrade ask + FAQ

Conversion from email sequence is expected to be a primary driver of free→Pro upgrades.

---

8. Technology & Infrastructure

Stack Overview

TradVue is built on a modern, low-overhead technology stack:

Layer	Technology	Why
Frontend	Next.js 14 (React)	Fast, SEO-friendly, excellent ecosystem
Backend	Next.js API routes + Supabase	Serverless-first, minimal ops overhead
Database	PostgreSQL via Supabase	Relational, mature, row-level security
Hosting	Railway	Simple deploys, scales with traffic
Auth	Supabase Auth	Built-in, secure, minimal maintenance
Market Data	Polygon.io / Tiingo APIs	Reliable, cost-efficient at scale
AI Layer	OpenAI API (GPT-4o)	Best-in-class for structured financial analysis

Current database: 26 tables covering users, trades, portfolios, journal entries, watchlists, market data cache, and scoring models.

Infrastructure costs: ~$200–300/month at current scale (pre-launch), scaling to ~$400–600/month at 5,000 active users. This is a key structural advantage over competitors who built on expensive, complex infrastructure.

AI-First Development Model

TradVue is built and operated by a founder-plus-AI-agents model:

- **Axle** — Orchestration, planning, infrastructure coordination
- **Bolt** — Development agent: feature implementation, debugging, code review
- **Zip** — Research, documentation, market analysis, content

This model enables **development velocity comparable to a 3–4 person team at near-zero labor cost**. It is not a gimmick — TradVue's MVP was built and shipped in a fraction of the time a traditional solo founder would require.

This architecture has real limits (AI agents don't replace human judgment on product vision or user research), but for a pre-seed stage company, it provides a meaningful runway extension and speed advantage.

Proprietary Technology

TradVue Score: A composite stock rating algorithm combining:

- Relative strength vs. sector and market (momentum component)
- Earnings quality metrics (fundamental component)
- Analyst estimate revision trend (sentiment component)
- Technical configuration score (setup quality)

The Score is designed to give traders a single, actionable number per stock — reducing research time without oversimplifying. It is a differentiator not available on any competing journal platform.

Future roadmap (not priced into current projections):

- Direct broker API integrations for automatic trade import (eliminates CSV friction)
- Pattern recognition across journal history: "Your average win on gap-and-go setups is 2.3R; your average loss on late-day reversals is 1.8R"
- Mobile app (React Native)

---

9. Traction & Milestones

Where We Are Today

TradVue is pre-revenue with a live, functional product. Key milestones completed:

Milestone	Status
MVP live at tradvue.com	✅ Complete
Database schema (26 tables)	✅ Complete
Trade journal with CSV import	✅ Complete
Portfolio tracking	✅ Complete
Market data integration	✅ Complete
News feed + economic calendar	✅ Complete
TradVue Score algorithm	✅ Complete
Email onboarding sequence	✅ Complete

Backup + recovery infrastructure	✅ Complete
Discord operations hub (23 channels)	✅ Complete
@TradVue Twitter handle secured	✅ Complete
Support infrastructure designed	✅ Complete

Near-Term Milestones

Milestone	Target
Private beta launch (50 invited users)	Month 1
100 registered users	Month 2
First paying Pro users	Month 2–3
Broker CSV import (10+ brokers)	Month 3
First ad revenue	Month 3–4
500 registered users	Month 4–5
1,000 registered users	Month 6–8
SEO content — 10 published articles	Month 6
First influencer partnership	Month 6–9
150 paying Pro users	Month 12

---

10. Financial Projections

Model Assumptions

Before the numbers: here are the assumptions, so they can be evaluated on their merits.

Growth assumptions:

- **User acquisition:** Organic only in Year 1. ~6 new registrations/day by Month 6. This is achievable with consistent Reddit and Twitter presence — no paid marketing required.
- **Free-to-Pro conversion: 10%** of active free users convert to Pro. This is the widely-cited industry benchmark for freemium SaaS (Dropbox, Notion, Figma all achieve 8–15%). We use 10% as a baseline.
- **Monthly churn (Pro users): 6%** — conservative for consumer SaaS. Annual plan subscribers have ~2% monthly equivalent churn.
- **Infrastructure costs:** Start at $200/month, scale with usage to ~$500/month by Year 2, ~$900/month by Year 3.
- **API costs (market data + AI):** Start at ~$150/month, scale to ~$400/month by Year 3 with usage-based pricing.

Year 1 Projections (Monthly View)

Month	Free Users	Pro Users	MRR (Subs)	Ad Revenue	Total MRR
1	50	0	$0	—	$0

2	120	8	$104	—	$104
3	220	18	$234	$50	$284
4	340	28	$364	$75	$439
5	480	40	$520	$100	$620
6	640	55	$715	$130	$845
7	800	70	$910	$160	$1,070
8	960	85	$1,105	$185	$1,290
9	1,100	95	$1,235	$200	$1,435
10	1,200	105	$1,365	$215	$1,580
11	1,350	128	$1,663	$225	$1,888
12	**1,500**	**150**	**$1,950**	**$240**	**$2,190**

Year 1 Total Revenue: ~$24,500 Year 1 Infrastructure + API costs: ~$4,200 Year 1 Net: ~$20,300 *(before founder compensation)*

3-Year Summary

Metric	Year 1	Year 2	Year 3
Free Users	1,500	8,000	25,000
Pro Users	150	800	3,000
MRR (Subscriptions)	$1,950	$10,400	$39,000
MRR (Advertising)	$240	$2,000	$6,000
MRR (Referrals)	—	$500	$5,000
Total MRR (EOY)	**$2,190**	**$12,900**	**$50,000**
ARR	**~$23,000**	**~$150,000**	**~$600,000**
Infrastructure + APIs	~$4,200	~$10,800	~$17,000
Net (before compensation)	**~$19K**	**~$139K**	**~$583K**

Year 2 and Year 3 totals include gradual ramp-up throughout the year; EOY figures reflect run-rate at year end.

Unit Economics

Metric	Value	Assumption
ARPU (Pro)	$12.99/mo	$12.99 flat; ~20% on annual ($8.25 equiv.)
Blended ARPU	~$11.50/mo	Mix of monthly and annual plans

Monthly Churn	6%	Consumer SaaS baseline
Average Customer Lifetime	~16.7 months	1 / 0.06
LTV (Pro user)	**~$192**	$11.50 × 16.7 months
CAC (organic, Year 1)	~$0–$15	Near-zero for organic; Reddit/Twitter time cost
CAC (paid, Year 2+)	~$25–$50 (estimated)	Based on comparable fintech/SaaS benchmarks; will be validated
LTV/CAC (organic)	**>10x**	Healthy
LTV/CAC (paid, est.)	**~4–8x**	Target >3x to justify paid acquisition
Payback period (paid)	~3–5 months	At $25–$50 CAC

Notes on churn: 6% monthly churn is realistic and deliberately conservative. Journal-based products benefit from *data lock-in* — a trader with 12 months of journal history in TradVue has a meaningful switching cost. We expect churn to trend down over time as users accumulate data, but we do not model this optimistically.

Notes on CAC: We genuinely don't know our CAC yet because we haven't launched. The organic CAC is near-zero (founder time cost only). Paid CAC will be tested and validated before any significant spend is committed.

Burn & Runway

TradVue's monthly operating cost at launch is approximately **$350–500/month** (hosting + APIs + tooling). This is the full burn rate. At this level:

- The company is profitable from **~35 Pro users** onward
- Year 1 infrastructure costs are covered by subscription revenue by Month 5–6
- No outside capital is required to operate — any investment accelerates growth, not survival

---

11. Team

Erick — Founder & CEO

Product vision, strategy, business development, and go-to-market execution. Erick brings the direction, prioritization, and commercial judgment that no AI can substitute. He is the sole human decision-maker and maintains full ownership of the company.

AI Development Team — Structural Advantage

TradVue operates with three specialized AI agents coordinated by the founder:

- **Axle (CEO Agent):** Planning, coordination, infrastructure decisions, business strategy support
- **Bolt (Dev Agent):** Feature implementation, code review, debugging, technical architecture
- **Zip (Research Agent):** Market research, content, documentation, competitive analysis

This is not a workaround for lacking a team — it is a deliberate architecture that gives TradVue development and operational capacity that a traditional solo founder couldn't match. The tradeoff is clear: AI agents are excellent at execution within defined scope, but require human direction for vision and judgment. That's exactly how the team operates.

Planned hires (contingent on revenue milestones):

- **Community Manager** (Month 6–9, ~$40–50K): Focused on Reddit/Discord/Twitter community building and user support
- **Designer/Frontend** (Month 9–12, contract): UI/UX improvements, marketing design

Advisors

Actively seeking advisors with background in:

- Retail fintech / trading SaaS (product, not finance)
- B2C SaaS growth and community-led distribution
- Broker partnership relationships

---

12. Risk Factors & Mitigation

Risk Register

Risk	Likelihood	Impact	Mitigation
Market data API dependency	Medium	High	Multiple provider relationships (Polygon + Tiingo); caching layer reduces live API reliance; graceful degradation on outage
Slow user acquisition	Medium	High	Product quality is the primary acquisition lever; low burn means we can take time to find the right channels without existential pressure
Churn higher than modeled	Medium	Medium	Journal data lock-in creates switching cost; rapid iteration on onboarding and activation
Well-funded competitor copies the model	Low	Medium	Speed advantage from AI-first dev; community trust is not easily bought; early users become advocates
Regulatory — "investment advice" exposure	Low	High	All AI outputs include explicit disclaimers; TradVue does not manage money or make recommendations for specific trades; legal review of all AI output copy
Infrastructure scaling issues	Low	Medium	Railway + Supabase are both horizontally scalable; load tested before launch
Broker partnership delays	Medium	Low	CSV import is functional without partnerships; broker integrations accelerate growth but are not required for baseline operation

On Regulation

TradVue is an analytics and journaling platform. It does not:

- Provide personalized investment advice
- Execute trades or hold funds
- Act as a registered investment advisor

All AI-generated insights are clearly labeled as informational analysis, not investment recommendations. Terms of service, privacy policy, and all product copy have been reviewed with this framing in mind. We will engage a fintech attorney before broker partnership agreements are signed.

---

13. The Ask

TradVue is not currently capital-dependent. The business can operate and grow on its own cash flow from early in Year 1.

However, TradVue is actively seeking:

Seed Investment to accelerate what organic growth cannot:

- Paid user acquisition testing once CAC/LTV data is validated (~Month 6+)
- Faster broker integration development
- Designer hire earlier than organically funded

Strategic Partnerships with:

- Retail brokers (referral arrangements, co-marketing)
- Trading educators and content creators (affiliate structure)
- Financial media / newsletters reaching retail trader audiences

Advisors with relevant network or operational experience in retail fintech or B2C SaaS

Use of Funds (Seed Round)

Allocation	%	Purpose
Marketing & User Acquisition	40%	Paid acquisition testing, influencer partnerships, content production
Feature Development	30%	Broker API integrations, mobile app foundation, AI feature expansion
Infrastructure	20%	Scaling headroom, redundancy, data provider upgrades
Operations	10%	Legal, accounting, tooling, contractor support

Investment range: TradVue is open to conversations about the right structure and size. Given the low burn and clear path to profitability, we are looking for investors who understand B2C SaaS fundamentals, not those expecting hockey-stick projections.

Why Now

The retail trader cohort created by 2020–2021 is maturing. Early retail traders who entered during the meme stock era are now 3–4 years in. They've experienced losses. They're starting to realize that trading without a system is gambling. **They're ready for tools that help them improve.** TradVue is positioned exactly for this moment — the point at which a trader moves from speculating to systematizing.

The window to build a trusted brand in this space — at this price point, with this feature set — is open. It won't stay open indefinitely.

Appendix: Key Assumptions Reference

Assumption	Value	Basis
Pro price	$12.99/mo	Market positioning vs. competitors
Annual price	$99/yr	~37% discount vs. monthly
Free→Pro conversion	10%	Freemium SaaS industry benchmark
Monthly churn (Pro)	6%	Consumer SaaS baseline

Avg. LTV	~$192	$11.50 blended ARPU × 16.7 months
Year 1 daily signups	~4–6/day (ramp)	Organic-only, realistic community seeding
Infrastructure cost	$200–500/mo Year 1	Actual Railway + Supabase + API pricing
Ad CPM	$3–5	Conservative for financial vertical
Broker referral rate	$50–100/funded account	Standard industry program rates

---
